

## PRIOR AUTHORIZATION POLICY

**POLICY:** Oncology (Injectable) – Talvey Prior Authorization Policy

- Talvey™ (talquetamab-tgvs subcutaneous injection – Janssen Biotech)

**REVIEW DATE:** 08/16/2023

---

### OVERVIEW

Talvey, a bispecific GPRC5D-directed CD3 T-cell engager, is indicated for the treatment of relapsed or refractory **multiple myeloma** in adults who have received at least four prior lines of therapy, including a proteasome inhibitor, an immunomodulatory agent, and an anti-CD38 monoclonal antibody.<sup>1</sup>

### Guidelines

Guidelines have not yet addressed Talvey. For late relapse or progressive multiple myeloma in patients who have received at least four previous therapies including a proteasome inhibitor, an immunomodulatory agent, and an anti-CD38 monoclonal antibody, the National Comprehensive Cancer Network (NCCN) **multiple myeloma** (version 3.2023 – December 8, 2022) clinical practice guidelines recommend Abecma® (idecabtagene vicleucel intravenous [IV] infusion), Carvykti™ [ciltacabtagene autoleucel IV infusion]), or Tecvayli™ (teclistamab-cqyv subcutaneous injection).<sup>2</sup> Blenrep™ (belantamab mafodotin-blmf IV infusion) is listed as “Useful in Certain Circumstances”.

### Safety

Talvey was approved with a Risk Evaluation and Mitigation Strategy (REMS) program due to the risk of cytokine release syndrome and neurotoxicity, including immune effector cell-associated neurotoxicity syndrome (ICANS).<sup>1</sup>

### POLICY STATEMENT

Prior Authorization is recommended for prescription benefit coverage of Talvey. All approvals are provided for the duration noted below. Because of the specialized skills required for evaluation and diagnosis of patients treated with Talvey as well as the monitoring required for adverse events and long-term efficacy, approval requires Talvey to be prescribed by or in consultation with a physician who specializes in the condition being treated.

**Automation:** None.

### RECOMMENDED AUTHORIZATION CRITERIA

Coverage of Talvey is recommended in those who meet the following criteria:

#### FDA-Approved Indication

1. **Multiple Myeloma.** Approve for 1 year if the patient meets ALL of the following (A, B, C, and D):
  - A) Patient is  $\geq 18$  years of age; AND
  - B) Patient has tried at least four systemic regimens; AND
  - C) Among the previous regimens tried, the patient has received at least one drug from each of the following classes (i, ii, and iii):
    - i. Proteasome inhibitor; AND
