PRIOR AUTHORIZATION POLICY

POLICY: Oncology – Xermelo Prior Authorization Policy
• Xermelo[™] (telotristat ethyl tablets – Lexicon)

REVIEW DATE: 05/15/2024

OVERVIEW

Xermelo, an inhibitor of tryptophan hydroxylase, is indicated for the treatment of **carcinoid syndrome diarrhea** in combination with somatostatin analog therapy in adults inadequately controlled by somatostatin analog therapy.¹

The efficacy of Xermelo was evaluated in patients with metastatic neuroendocrine tumor and carcinoid syndrome diarrhea who were having between 4 to 12 daily bowel movements despite the use of somatostatin analog therapy at a stable dose for at least 3 months.¹

Guidelines

The National Comprehensive Cancer Network (NCCN) guidelines for treatment of neuroendocrine and adrenal tumors (version 1.2023 – August 2, 2023) state that Xermelo can be considered in combination with long-acting somatostatin analog (e.g. Sandostatin[®] LAR Depot [octreotide subcutaneous injection] or Somatuline[®] Depot [lanreotide subcutaneous injection]) for persistent diarrhea due to poorly controlled carcinoid syndrome.²

POLICY STATEMENT

Prior Authorization is recommended for prescription benefit coverage of Xermelo. All approvals are provided for the duration noted below.

Automation: None.

RECOMMENDED AUTHORIZATION CRITERIA

Coverage of Xermelo is recommended in those who meet the following criteria:

FDA-Approved Indication

- 1. Carcinoid Syndrome Diarrhea. Approve for 1 year if the patient meets ONE of the following (A <u>or</u> B):
 - A) Initial Therapy. Approve if the patient meets ALL of the following (i, ii, and iii):
 - i. Patient has been on a long-acting somatostatin analog therapy for at least 3 consecutive months; AND

<u>Note</u>: Examples of long-acting somatostatin analog therapy are Somatuline Depot (lanreotide subcutaneous injection) and Sandostatin LAR Depot (octreotide subcutaneous injection).

- **ii.** While on a long-acting somatostatin analog therapy (prior to starting Xermelo), the patient continues to have at least four bowel movements per day; AND
- iii. Xermelo will be used concomitantly with a long-acting somatostatin analog therapy.
- **B**) <u>Patient is Currently Receiving Xermelo</u>. Approve if the patient is continuing to take Xermelo concomitantly with a long-acting somatostatin analog therapy for carcinoid syndrome diarrhea.
